Status LED.

All odyssey loggers manufactured after January 1st 2009 will have a red LED status indicator fitted behind the battery disk. The LED will flash to indicate following conditions:

- 4 x Quick Flashes:** When power is reapplied to the logger after a power-off period of at least 30 seconds.
- 2 x Quick Flashes:** Logger started successfully.
- 1 x Quick Flash:** Logger is logging data – flashes once on each scan.
- 1 x Long Flash:** Faulty logger or flat battery.
- No Flashes:** Faulty logger.
